Profile

I am a highly motivated, hard-working individual who is always willing to take responsibility for myself and others. I take great pride in working at a very high standard and am constantly looking for new ways to improve my performance. I consider myself to be an integral part of my team, and am able to work alongside colleagues of all levels and departments. I am confident in my ability to work independently, planning my own workload. I consider myself to be an excellent problem-solver, always looking to find both correct and efficient solutions.

After deciding on a career change, I am now looking to get back to my true passion and return to work in Web Development and have dedicated my time to self-teaching, working through a number of courses and am now competent in HTML/CSS/Javascript and currently learning React.JS as well as Node.JS/Express.JS and PostgreSQL for some Back-End processes.

I am looking to constantly evolve and learn new technologies that become available, keeping myself updated on a daily basis with future trends in technology. I am willing and enthusiastic to learn any languages/frameworks that any role may require (e.g. Java/Python) and believe I can learn these rapidly.

IT Related Knowledge/Experience

Good working knowledge:

HTML, CSS, Javascript, Flexbox, CSS-Grid, General Computer Science Theory, Linux, various Office-type products

Hobbies and Interests

I have been proactive since a young age in the use of advancing technology and regularly spend time on computers/various systems whether through designing/coding or simply having fun gaming. I have an interest in numerous sports as a spectator and like to relax by playing boardgames as part of a number of local groups, as well as reading.
